

Part 2 - Customer CRM, Product Inventory and Stock Movement

Detailed notes on customer management, follow-ups, product master, stock level and audit trail.

How to read this pack

Blue boxes are explicit case-study requirements recovered from the source explanation. Green boxes are implementation recommendations or inferences. This distinction helps you explain what was mandatory and what you chose as a developer.

Language style: simple Hinglish, interview-focused, and implementation-oriented. The goal is to help you build the project and confidently explain why each part exists.

1. Customer CRM Module

Case-study requirement

Customer fields include name, mobile, email, business name, GST number, customer type, address, status, follow-up date and notes. CRM functionality includes adding/editing/searching customers, viewing details and adding follow-up notes.

CRM module sirf customer list nahi hai. Iska purpose sales team ko customer relationship track karne mein help karna hai. Example: kaun lead hai, kaun active customer hai, kisko next week call karna hai, kis customer ne kya requirement batayi.

Field	Why it matters
Customer name	Person identify karne ke liye
Mobile/email	Contact ke liye
Business name	B2B sales mein customer usually business hota hai
GST number	Invoice/accounting/tax identification ke liye
Customer type	Lead, retail, wholesale, distributor jaise segmentation ke liye
Address	Delivery and business reference ke liye
Status	Lead, active, inactive, converted jaise pipeline view ke liye
Follow-up date	Salesperson ko reminder mile ki kab call karna hai
Notes	Conversation history and context ke liye

2. Suggested Customer Screens

```
Customers Page
[+ Add Customer] Search [_____] Status [All]

Name Business Type Status Follow-up
Rahul ABC Traders Wholesale Active 15 Aug 2026
Amit XYZ Store Retail Lead 17 Aug 2026
Neha PQR Ltd Distributor Active -
```

Customer detail page mein complete profile, notes timeline, upcoming follow-up date, and edit option hona chahiye. Notes ko separate timeline ki tarah dikhana useful hai because salesperson ko previous conversation quickly samajh aa jata hai.

3. Follow-up Flow

```
Salesperson calls customer
-> Customer interested in 100 units
-> Add note: Interested in 100 units
-> Set follow-up date: 15 Aug 2026
-> Dashboard shows upcoming follow-up
```

Interview point

Follow-up notes CRM ko real CRM banate hain. Without notes and follow-up dates, module sirf customer CRUD reh jaata hai.

4. Product and Inventory Module

Case-study requirement

Product fields include product name, SKU, category, unit price, current stock, minimum stock and warehouse location.

Product master company ke sellable items ka central list hai. Inventory current quantity batata hai. Warehouse location se pata chalta hai product kis warehouse/rack/location par available hai.

Product field	Example	Purpose
Name	Dell Monitor	Readable product identity
SKU	MON-001	Unique stock keeping unit
Category	Electronics	Filtering/reporting
Unit price	12000	Default sales price
Current stock	25	Available quantity
Minimum stock	10	Low-stock threshold
Warehouse location	Vadodara WH-01	Physical location

5. Low Stock Logic

Agar current_stock minimum_stock se kam ho jaye, UI mein Low Stock indicator show karo. Ye small feature hai but business value strong hai kyunki warehouse team ko reorder signal milta hai.

```
if current_stock <= minimum_stock:
    show LOW STOCK
```

Example:

Current stock = 7

Minimum stock = 10

Result = Low stock alert

6. Stock Movement Log

Case-study requirement

Maintain stock movement log with product, quantity changed, IN/OUT, reason, created by and timestamp.

Important rule: stock ko silently overwrite nahi karna. Agar stock 100 se 90 hua, system ko record rakhna chahiye ki 10 quantity OUT hui, reason Sale tha, kis user ne action kiya aur kab kiya.

```
Product: Dell Monitor
100 -> initial stock
-20 -> sold
+50 -> purchased
-10 -> sold
```

Movement	Meaning	Example reason
IN	Stock increase	Purchase, return, adjustment
OUT	Stock decrease	Sale challan, damage, adjustment

Recommended implementation

Keep products.current_stock for fast display and stock_movements as the audit trail. Every stock change should create a movement row.

7. Inventory Demo Script

- 1 Open Products page and show product fields: SKU, category, unit price, current stock, minimum stock and warehouse location.
- 2 Create or update a product stock quantity.
- 3 Show stock movement entry with IN/OUT, reason, user and timestamp.
- 4 Reduce stock below minimum and show Low Stock indicator.
- 5 Explain that stock history helps audit and debugging.
